Better... because IT'S WELDED

The appearance, sturdiness and cleanliness of the modern aluminum tea kettle, illustrate why many good products are better if they are welded.

The word "welded" is packed with meaning. It means light-weight without sacrifice of strength. It means sturdiness and ruggedness that can never shake loose. It means invisible joints as strong as the base metal. It means smooth surfaces with no place for corrosion to start. In short it means all that one piece construction can mean plus complete design freedom from the limitations

of most other methods of metal fabrication.

Tomorrow's engineers will be expected to know how to apply this modern metal-working process to a wide range of metals—steel and iron, aluminum, copper, brass and all other alloys and metals, even platinum.

Technical booklets describing the application of the oxy-acetylene process of welding and cutting are available without obligation from any Linde Office. Write to the Linde Air Products Company, Unit of Union Carbide and Carbon Corporation, New York and principal cities.

Everything for Oxy-Acetylene Welding and Cutting
